Step 1 — Removing the top portion
● Remove Palette's top lid.

● Using the provided Torx screwdriver, remove the 4 screws on each corner of the substructure.

Step 2 — Isolating the substructure

● Remove the IO plate cover from the unit, by pulling the tab on the Ethernet port. The IO plate cover is snap-fit to the unit and can be placed back easily.

● Gently lift and remove the substructure from the bottom casing.

● You'll now be able to replace the main board, fans, and other components.
